# NONUNION FRACTURES RESOLVED

Effective • Painless • Easy to use

Some fractures can be difficult to heal. **EXOGEN** Ultrasound Bone Healing System is a safe, noninvasive treatment proven to help heal nonunions, with:

**38%**

accelerated healing of indicated fresh fractures\*<sup>1,2</sup>

**86%**

heal rate for fractures not healing on their own<sup>13</sup>

**EXOGEN** is compatible with all types of conservative and surgical fracture management techniques.

**\*Indications for Use:** EXOGEN is approved for the accelerated healing of indicated acute fractures and the treatment of nonunions<sup>1</sup> (including infected, instrumented, or poor bone quality nonunions, excluding skull and vertebrae).

There are no known contraindications. Patients may experience sensitivity to the ultrasound gel.

## Spine

### 1 ACDF

319 patients (IDE RCT)

"i-FACTOR subjects demonstrated higher overall success rate than control (autograft) subjects (68.75% and 56.95% respectively,  $p = 0.0382$ )\*"

### 2 PLF

98 patients (RCT)

"This RCT indicates i-FACTOR being significantly superior to allografted bone in enhancing intertransverse fusion ( $p = 0.000$ )\*"

### 3 ALIF

110 patients

"...high fusion rate and clinical improvements comparable to the published results for ALIF using autograft or BMP"

### 4 PLIF

40 patients

"i-FACTOR is associated with faster formation of bridging bone when compared to autologous bone in patient's undergoing PLIF"

## Orthopedics

### 5 Long bone non-union and delayed union

22 patients – 90% bone consolidation

"P-15 appears to offer a safe, economical, and clinically useful alternative to autograft in the repair of ununited fractures"

### 6 Foot and ankle

170 patients

i-FACTOR yields 92% fusion at 12 months post-op across fore-, mid- and hindfoot joints

### 7 Foot and ankle

16 patients

100% fusion at 12 months in hindfoot and ankle fusion revision procedures

### 8 Peri-acetabular osteotomy

51 patients

Patients treated with i-FACTOR were 3x more likely to attain a partial or complete fusion at 6 months post-op compared to allograft.
